

Name: _____ Date: _____

**One Needle, One Syringe, Only ONE Time
Post-test**

1. Whenever possible multidose vials should be dedicated to a single patient to provide an extra layer of protection.

Yes No

2. Re-using a syringe on the same patient with changing the needle is regarded as safe injection practice.

Yes No

3. Medications packaged as single-use vials should never be used for more than one patient.

Yes No

4. Bags or bottles of intravenous solutions (normal saline, sterile water) may be used as a common source of supply for multiple patients.

Yes No

5. Use aseptic technique to avoid contamination of sterile injection equipment.

Yes No

6. Use fluid infusion and administration sets for one patient only. IV tubing and or valves do not prevent backflow and contamination of infusion fluids.

Yes No
